

## KUNKLE BAILEY 707 SAFETY RELIEF VALVE

A safety relief valve that encompasses a top guided design, combining an unobstructed seat bore with high lift capability

### FEATURES

- Choice of resilient or metal trims.
- Choice of threaded or flanged connections.
- Test levers available for inline safety checking.
- Alternative sealed dome for service conditions requiring a pressure tight seal on the discharge side (eg. liquid service with enclosed discharge).

### GENERAL APPLICATION

The 707 is certified to BS EN 4126 Part 1 (BS6759 pt 1:2:3) and is suitable for duty on air/gas, steam/hot water (above 212°F (100°C)) and process liquid.

### TECHNICAL DATA

Material:	Bronze
Sizes:	½" to 2" (DN 15 to 50)
Connections:	Threaded or flanged
Pressure range:	4.4 to 348 psig (0.3 to 24 barg)
Temperature range:	-4° to 435°F (-20° to 224°C)

### Other gases

If you wish to use the valve on other compatible gases, the sizing details above can be used. However, the valve capacity will change depending on the specific gravity of the flowing gas. Multiply the valve air capacity by  $1/\sqrt{SG}$  to give the gas capacity. SG = specific gravity (relative to air = 1).

#### NOTE

\* Minimum overpressure = 0.07 barg at set pressure less than 0.7 barg.

Pressurized (un-vented) hot water systems have the entire discharge capacity handled solely by the valve. Open vented systems take into account the discharge capacities of the vent. Hence the equivalent discharge of the valve/system is considered to be double the chart capacities above.

The valves are fitted with a suitable spring. Every valve is tested thoroughly for efficient operation before leaving the factory. Ensure the set pressure is within the range of the existing spring. If not, select and fit the correct spring from these tables. All our springs are low stressed and painted to minimize corrosion. Springs listed above comply with the requirements of BS EN ISO 4126: Part 7 and BS6759: Part 1.
